Systems / DevOps Engineer. Currently studying Cybersecurity for the [Cisco CyberOps Certification](#).

The last 5 years in New Zealand was as an IT manager that included system engineering, turnkey on-premise infrastructure builds, large-scale render farms, and client solutions with some DevOps for a video photogrammetry company. That startup had some 90+ folks employed at one point. This required quite a bit of on-premise IT infrastructure design and deployment in multiple countries both for us and our clients. I learned Ansible as a tool to commission bare metal render farms and maintain systems in Wellington, Seoul, and Tokyo. That job was pretty awesome most of the time. Probably the best part was the fact I was always learning something new and occasionally having my hat handed to me by some left field challenge. It was my first startup and I would definitely do another if I had the chance.

My past before said startup has been a 50/50 split of technical and creative experiences. I have a past background in on-set production and post VFX / Compositing which also includes on-set and post audio for small movies, music, and commercials in Nashville and New York City. Today, I'm currently studying CyberSecurity and [Shooting ocean sports](https://www.kite.nz) in my spare time.

PROFESSIONAL SKILL SET	**HOBBY SKILL SET**
On Prem and Cloud DevOps	Unreal Engine
Ansible Automation	Photography
Server Administration	Digital Art
Bare Metal deployment via Maas	Photogrammetry
Virtualization and Hypervisors	Blockchain use cases
